Languages

HUMAN	Spanish, Mandarin, Latin, some Persian and French, reading knowledge of classical Greek and most Romance languages. Grammatical knowledge of a many Indo-European languages, Korean and others.
MACHINE	Python, Perl, R, PHP, Matlab/GNU Octave, bash/shell, some superficial knowledge of C, common LISP and Haskell; markup languages including \LaTeX / \XeTeX , R Markdown, HTML, CSS.

Tools I Use

I have lots of tutorials on many of these programs and tools on my [my YouTube channel](#).

Usual Workflow

I use a **vim**-based setup in a tiling window manager (**i3-gaps**). I compile documents using **R Markdown** or **\LaTeX** , and **biber** for references. I prefer to do multimedia manipulation in the terminal with tools like **imagemagick** and **ffmpeg** for extensibility's sake. I've run Microsoft, MacOS and GNU/Linux systems (both Debian and Arch-based varieties, as well as Void Linux).

Programs I'm Familiar With

tmux, ssh, RStudio, Blender (mostly for video-editing), Praat, Audacity, E-Prime, GIMP, pandoc, Jupyter. I've managed websites manually via ssh and vim using HTML/CSS/PHP and with tools such as Github Pages (Jekyll) Word-Press via either cpanel or wp-cli. Some experience with myBB.

Public Code and Scripts

2018	mutt and offlinelMAP wizard <i>A fully-featured configuration tool.</i> A tool for automatically configuring mutt, offlinelMAP, notmuch and other parts of a full email system with automatic detection of IMAP and SMTP protocols and automatic password encryption
2017–2018	shortcut-sync <i>A small system for synchronizing configs between bash and other shells, ranger and qute-browser.</i>
IN PROGRESS	Corpus Latinum Lucæ <i>A planned linguistic corpus of the Latin language, to be searchable by regexes and grammatical category, with an interface written in Python.</i> As of now I've constructed the parser to generate the corpus from raw text files.
2017–Now	Luke's Auto-Rice Bootstrapping Scripts (LARBS) <i>A dynamic installer for an i3wm Arch Linux distribution</i>
2016–Now	Voidrice <i>Linux dotfiles</i> A set of GNU/Linux dotfiles that I popularized on YouTube, aiming at creating a powerful, optimized, all-purpose and lightweight general computing environment. Innovated dynamically configured and synced rc files.
2015	http://LukeSmith.xyz <i>My website</i> Written from scratch. Modern traditional feel. I generate the website offline with PHP and upload a static version of only HTML/CSS.
2016–2017	/Comfy/ Arch <i>Automatic ricing tool</i> A web-based deployment system for configuration files which focuses on enabling novice Linux users to get immersed quickly in advanced ricing environments. No longer actively maintained as it has been largely replaced by LARBS (above).

2013	Vulgarizer <i>Sound Change Simulator</i> A string-manipulation paradigm written in Python for simulating phonetic and phonological change over time. The original implementation focused on modeling changes between Latin and Spanish and then other Romance languages, but if I continue the project, my hope is to generalize this.
